Luciano Rodrigues Lucio Neto

Software Engineer

Address	Natal, Brazil	**Phone**	+55 84 99131-7498
Email	lucianorlneto@gmail.com	**Links**	linkedin.com/in/luciano-rodrigues-lucio-neto-88aa58165 github.com/lucianorlneto
Nationality	Brazilian		

1 - PROFILE

Software Engineer with over 8 years of experience in web and mobile development, mostly with **React Native**, **React** and **TypeScript**. Since 2022, has worked on apps for clients such as Marisa (millions of users), Omo Lavanderia and Grupo Vamos, and on **NestJS** microservices on the back end. Uses custom **Claude Code** workflows with **MCP** in daily development.

Previously worked for almost four years at Lógica on a **PHP** ERP, **REST APIs** and **GraphQL** integrations, with **PostgreSQL** databases and deployments on **Docker** and **Kubernetes**. Holds a degree in Computer Engineering from UFRN and is pursuing a postgraduate degree in Applied AI Engineering.

2 - EXPERIENCE

May 2022 — Present
4 years and 6 months

Bamse Digital (formerly Sparta Labs/Môre)

Blumenau (Remote)

- ***Software Engineer***
  - Front-end and full stack work in agile squads (Jira, ClickUp) serving the company's clients.
  - **Marisa**: front end on the React Native apps, in two periods.
    - Since May 2026, maintains and extends the e-commerce app, used by millions of users, and generates the builds and publishes them to the **App Store** and **Google Play**.
    - Fixed recurring bugs in analytics and campaign tracking, integrated the new **Scala** vendor for search, recommendations and dynamic product lists built from specific URLs, and is working on the full migration from **Hybris** + Scala to **VTEX**.

    - Built a **Claude Code** harness for the project, with skills, subagents and an approval gate at each phase, that takes a **Jira** card to a pull request: the card comes in through the Atlassian **MCP**, a subagent checks it against the project docs for conflicts and gaps, and three reviewers validate the plan against the spec, project rules and code before implementation. On a partly legacy codebase picked up recently, it cut implementation time and rounds of QA rework.
    - Uses the **VTEX** MCP to support the migration and the **Firebase** MCP to analyze and fix crashes reported in **Crashlytics**.
    - Earlier, in a team of three developers, moved the digital banking features out of the main app into a separate module loaded inside it, then built and maintained that module, which covers digital banking and insurance services.
- **Omo Lavanderia**: full stack developer in a team of four developers, two UI/UX designers and a tech lead, building from scratch the customer app for Omo's self-service laundries. The MVP shipped in 8 months, and the app is used by tens of thousands of users.
    - Helped build the **React Native (Expo)** app: sign-up, store search on **Google Maps**, machine booking, starting machines at checkout, vouchers bought for other users, payments through the **PagBank** gateway, and live time and status for each machine, fed by the machine supplier's webhooks.
    - On the back end, contributed to **NestJS** and **Fastify** microservices for payments, message consumption, the core domain and machine activation, using **PostgreSQL**, **Prisma** and **RabbitMQ**, and took part in the database modeling.
    - Wrote part of the test suite: end-to-end tests with **Maestro** and unit tests with **Jest** and **React Testing Library**.
    - Debugged production issues with **Prometheus**, **Grafana Loki** and **Grafana Tempo** on an **AWS** (S3, CloudFront, EC2) and **Kubernetes** infrastructure, and added a rate limiting rule in **Cloudflare**.
- **Grupo Vamos**: three products, each in a team of two developers.
    - Built from scratch the truck driver app in **React Native (Expo)** for iOS and Android, with news, truck status and vehicle data. Delivered the MVP in 4 months and kept maintaining it; used by thousands of drivers.

    - Built a fleet management web dashboard in **React** and **Chakra UI**, with the MVP delivered in 3 months, used by thousands of users. It covers fleet composition, repair history, and filters by region, state and city, plus a customizable home where users drag and drop cards from internal screens, each card with its own filter and a page filter that applies to all of them.
    - Maintained the **React Native** inspection app used in Vamos workshops, a dynamic checklist that guides the evaluation of each truck on arrival.
    - Helped implement end-to-end tests with **Cypress** and unit tests with **Jest**.
- At **Smiles Fidelidade**, in a team of four developers, adapted email templates to **Oracle Responsys** using **HTML/CSS**, **SQL** and **RPL** for the personalization logic.
- Covered vacations on **React Native** apps for **Henry Schein Brasil** and **Semex Brasil**. At Henry Schein, maintained a modular codebase whose business logic modules (rules, API connections) and UI modules (components, layouts) are reused across several apps.
- Integrated **Google Firebase** (Push Notifications, Remote Config, Database, Authentication) and **Google Analytics** into mobile apps.

Aug 2018 — May 2022

3 years and 9 months

Lógica Sistemas de Informação

Natal

- ***Full Stack Developer (Aug 2019 — May 2022)***
    - Worked on bug fixes and new features in the company's ERP, built in **PHP**.
    - Maintained a white label **React Native** app shipped to several clients, each with its own brand, colors and features, and managed its releases on the **App Store** and **Google Play**.
    - Maintained an offline-first **React Native** app for clients' field technicians to record and review service visits, along with its **GraphQL** API in **Node.js**.
    - Built **REST APIs** in **Lumen** to integrate TV channel services with the ERP's clients.
    - Shared responsibility for the **PostgreSQL** databases of these applications and deployed them with **Docker** and **Kubernetes**.
- ***Full Stack Developer Intern (Aug 2018 — Aug 2019)***

- Full Stack Developer member of a team that worked on bug fixes and development of new features in an Enterprise Resource Planning (ERP) system, built in **PHP**, focusing on software solutions for telecommunications and business management issues.

Aug 2017 — Nov 2017
3 months

Barreira do Inferno Launch Center (CLBI) *Natal*

- ***Internship as Embedded Systems Engineer***
  - Wrote embedded **C++** on **Arduino** for a confidential CLBI project.

3 - EDUCATION

May 2026 — Present
6 months

Faculdade UNIPDS

- Postgraduate Degree in Applied AI Engineering (in progress)
- Coursework: LLMs, RAG, embeddings, vector databases and AI agents.

Mar 2013 — Jul 2018

Federal University of Rio Grande do Norte (UFRN) *Natal*

- Bachelor's Degree in Science and Technology (Mar 2013 — Jun 2016)
- Bachelor's Degree in Computer Engineering (Jul 2016 — Jul 2018)

4 - SKILLS

Languages: TypeScript, JavaScript, HTML/CSS, SQL, PHP

Front-end/Mobile: React, React Native, Expo, React Native Web, Tailwind, Chakra UI

Testing: Jest, React Testing Library, Cypress, Playwright, Maestro

Back-end/Data: Node.js, NestJS, Fastify, GraphQL, REST APIs, PostgreSQL, Prisma, RabbitMQ

Platforms: Firebase, VTEX, SAP Hybris, Oracle Responsys

DevOps/Tools: Docker, Kubernetes, AWS, Cloudflare, Git, App Store Connect, Google Play Console

Observability: Prometheus, Grafana Loki, Grafana Tempo

AI-assisted development: Claude Code (skills, subagents), MCP (Atlassian, VTEX, Firebase, GitHub), Prompt Engineering, Context Engineering, Agent Harness

5 - LANGUAGES

Portuguese: Native

English: Upper Intermediate (B2)
