1 - PROFILE

Software Engineer with over 8 years of experience building web and mobile products, mostly with **React Native**, **React** and **TypeScript**, plus **Node.js** back ends in **NestJS**. Since 2022, has worked in **Agile/Scrum** teams on apps for clients such as Marisa (millions of users), Omo Lavanderia and Grupo Vamos, and is now the only developer on Marisa's e-commerce app. Built a **Claude Code** harness with skills, subagents and **MCP** that takes Jira cards to reviewed pull requests.

Previously worked for almost four years at Lógica with **PHP**, **React Native** and **PostgreSQL**. Holds a Computer Engineering degree from UFRN and is pursuing a postgraduate degree in Applied AI Engineering.

2 - EXPERIENCE

Bamse Digital (formerly Sparta Labs/Môre)

May 2022 — Present · 4 years and 6 months · Blumenau (Remote)

- ***Software Engineer***
  - **Marisa**: React Native front end in two periods, first on the digital banking module and, since May 2026, on the e-commerce app.
    - Only developer on the e-commerce app team. Maintains and extends the app, used by millions of users and built with **Redux** (legacy), **Zustand** and **React Query**, and publishes its builds to the **App Store** and **Google Play**.
    - Fixed recurring bugs in analytics and campaign tracking, integrated the new search vendor (Scala), also used for recommendations and URL-based product lists, and is migrating the app from **Hybris** and that vendor to **VTEX**.
    - Built a **Claude Code** harness with skills, subagents and an approval gate at each phase that takes a **Jira** card to a pull request: the card comes in through the Atlassian **MCP**, a subagent checks it against the project docs for conflicts and gaps, and three reviewers validate the plan against the spec, project rules and code. Compared with earlier projects, it cut implementation time and rounds of QA rework.
    - Fixed production crashes that QA had not caught, tracked down with the **Firebase** MCP and **Crashlytics**, and uses the **VTEX** MCP to support the migration.
    - Earlier, in a team of three developers, moved the digital banking features out of the main app into a separate **React Native Web** module loaded inside it, then built and maintained that module, which covers digital banking and insurance and is used by hundreds of thousands of people.
  - **Omo Lavanderia**: full stack developer in a team of four developers, two UI/UX designers and a tech lead, building from scratch the customer app for Omo's self-service laundries. The MVP shipped in 8 months, and the app is used by tens of thousands of users.
    - Developed features of the **React Native (Expo)** app, built with **Zustand**, **React Query** and **NativeWind**: sign-up, store search on **Google Maps**, machine booking, starting machines at checkout, vouchers for other users, **PagBank** payments, live machine status from the supplier's webhooks, **Firebase** push notifications and deep linking.
    - On the back end, built features in **NestJS** and **Fastify** microservices for payments, messaging, the core domain and machine activation, with **PostgreSQL**, **Prisma** and **RabbitMQ**, and co-designed the database.
    - Wrote part of the tests (end-to-end with **Maestro**, unit with **Jest** and **React Testing Library**); the app shipped through a **CI/CD** pipeline on **GitHub Actions**.
    - Debugged production issues with **Prometheus**, **Grafana Loki** and **Grafana Tempo** on an **AWS** (S3, CloudFront, EC2) and **Kubernetes** infrastructure, and added a rate limiting rule in **Cloudflare**.
  - **Grupo Vamos**: three products, each in a team of two developers.

    - Built from scratch the truck driver app in **React Native (Expo)** and **Redux** for iOS and Android, with news, truck status, vehicle data, push notifications through **Firebase** and deep linking. Delivered the MVP in 4 months and kept maintaining it; used by thousands of drivers.
    - Built a fleet management web dashboard in **React**, **Redux Toolkit** and **Chakra UI** (MVP in 3 months, thousands of users), with fleet composition, repair history, regional filters and a drag-and-drop home screen.
    - Maintained the **React Native** and **Redux** inspection app used in Vamos workshops, a dynamic checklist that guides the evaluation of each truck on arrival.
    - Wrote end-to-end tests with **Cypress** and unit tests with **Jest**.
- Shorter engagements: **Oracle Responsys** email templates (**HTML/CSS**, **SQL**, **RPL**) for **Smiles Fidelidade**, and vacation cover on **React Native** apps for **Semex Brasil** and **Henry Schein Brasil** (modular codebase shared across several apps).
- Reviewed teammates' pull requests across projects and onboarded colleagues joining them.

Lógica Sistemas de Informação

Jul 2018 — May 2022 · 3 years and 10 months · Natal

- ***Full Stack Developer (Jul 2019 — May 2022)***
    - Worked on bug fixes and new features in the company's ERP, built in **PHP**.
    - Maintained a white label **React Native** app published as a separate store app for each of 12+ clients, with their own brand, colors and features, and managed the releases on the **App Store** and **Google Play**.
    - Maintained an offline-first **React Native** app used by hundreds of field technicians across Brazil to record and review service visits, along with its **GraphQL** API in **Node.js**.
    - Built **REST APIs** in **Lumen** to integrate TV channel services with the ERP's clients.
    - Co-managed the **PostgreSQL** databases of these apps and deployed them with **Docker** and **Kubernetes**.
- ***Full Stack Developer Intern (Jul 2018 — Jul 2019)***

3 - EDUCATION

Faculdade UNIPDS

May 2026 — Present · 6 months

- Postgraduate Degree in Applied AI Engineering (in progress)
- Coursework: LLMs, RAG, embeddings, vector databases and AI agents.

Federal University of Rio Grande do Norte (UFRN)

Mar 2013 — Jul 2019 · Natal

- Bachelor's Degree in Science and Technology (Mar 2013 — Jun 2016)
- Bachelor's Degree in Computer Engineering (Jul 2016 — Jul 2019)

4 - SKILLS

Languages: TypeScript, JavaScript, HTML/CSS, SQL, PHP

Front-end/Mobile: React, React Native, Expo, React Native Web, Redux, Redux Toolkit, Zustand, React Query, Tailwind, NativeWind, Chakra UI

Testing: Jest, React Testing Library, Cypress, Playwright, Maestro

Back-end/Data: Node.js, NestJS, Fastify, GraphQL, REST APIs, PostgreSQL, Prisma, RabbitMQ

Platforms: Firebase, VTEX, SAP Hybris, Oracle Responsys

DevOps/Tools: Docker, Kubernetes, AWS, Cloudflare, Git, GitHub Actions, App Store Connect, Google Play Console

Practices: Agile/Scrum, CI/CD, code review

Observability: Prometheus, Grafana Loki, Grafana Tempo

AI-assisted development: Claude Code (skills, subagents), MCP (Atlassian, VTEX, Firebase, GitHub), Prompt Engineering, Context Engineering, Agent Harness

5 - LANGUAGES

Portuguese: Native

English: Upper Intermediate (B2)
